CANDAN TECHNOLOGY
Technology That Works for You

COMPANY
PROFILE
CANDAN TECHNOLOGY

Expediting

the full potential

in the digital

consultation world

Vision

To optimally oversee
the planet's technological evolution

Mission

We manage your
day-to-day technical challenges,
hence helping you concentrate
on what truly matters.

Candan Technology was established in the year 2022, and since then the Company has amassed a targeted portfolio of high-quality assets and clients with a promising growth profile. We have created a lasting legacy that serves as the foundation for our continued service and growth. Furthermore, Candan Technology is strengthened with a team of highly skilled and professional team of Engineers, Designers, Installers, Technicians and Sales Professionals, with over 20 years of experience in the global industry of Information Technology. Our company has always believed in providing personalized services to our valuable clients around the world to ensure that the exemplary standards of the industry are embossed into every step of the way. We have over 15 partnerships with renowned brands that are at the pinnacle of the international IT industry that we collaborate with, to achieve the ideal objectives of our clients, from design to implementation through

our clients, from design to implementation through thorough consultation and servicing.

We stand with pride and confidence amongst many other establishments in the industry, as we are fueled by our distinctive category of Professional Engineering Services. We ensure through methodical procedures that the monitoring and implementation requirements for infrastructures are carefully curated and executed accordingly.

This feature also helps the industrious entrepreneurs to maintain a low head count in their business by outsourcing professionals to look over the operations and ensure the best results. Candan Technology is devoted to inducing our team of proficient engineers to generate the finest extraction out of the projects they lead.

DATACENTER SOLUTIONS

Power/Environment Monitoring

The datacenter serves as the nerve center in an organization, and where all sensitive data that is directly relevant to the functioning of a business is processed. With our assistance, you can be confident and build a resilient digital foundation for your business.

We cover Cabling, Power, Flooring, Racks, Networking, Environment monitoring solutions, Servers/compute solutions, Storage Solutions, Network Monitoring Solutions, Software Defined Datacenter Solutions, Virtualization, Backup and Replication.

SERVERS

Optimize configuration for continues supply of compute resources for the daily demands of the mission critical applications.

DELL Technologies   Hewlett Packard Enterprise   Lenovo

STORAGE

Store, Protect and Manage your valuable data on our scalable storage solutions

DELL Technologies   Hewlett Packard Enterprise   Lenovo   asustor
ASUSTOR Inc.

QSAN   Infortrend®

CLOUD SOLUTION

Extend your high demanding infrastructure requirements with our flexible public cloud platform solutions. Our expertise will support your organization with the Cloud migration and even bridge the local infrastructure to build a hybrid platform.

Dialog   Google Cloud Platform   Microsoft Azure

BACKUP & REPLICATION

Solutions to assure you data availability at all time with our secure backup and replication solutions.

CONSOLIDATION/ SOFTWARE DEFINED

Optimize your Datacenter to increase efficiency and performance while reducing the operation cost of running mission critical hardware's. Our experience and certified engineering team is flexible to tailor the best solution to suit your needs.

POWER

Partnered with the most reliable Uninterrupted Power Supplies (UPS) and Power Storage Solutions .

SECURITY SOLUTIONS

Security is the prevention of unauthorized access to or modification of information stored on a computer system or network. Keeping computers from deviating from their intended paths or malfunctioning would fall under this category. It's vital to the success of any enterprise that relies heavily on technology. We have the ability to provide protection to your systems by covering End point Security Solutions, Datacenter Security Solutions, Perimeter Security Solution, Cloud Security Solutions, and Mobile Security Solutions

PERIMETER SECURITY/ FIREWALL

Advance security solutions to recognize threats proactively and take necessary actions to protect your local area network from outside threats preventing data breach.

CLOUD SECURITY

Our security solutions are now extended to protect your critical data seated on third party cloud platforms.

CLIENT SECURITY

With increase in usage of laptops, mobile devices and IOT devices managing security has become a challenge. Client devices are mainly targeted to breach organization networks which are under fierwall. Our security solution stack consists of solutions to patch all vulnerabilities in your organization and seal them to secure your client data.

UNIFIED COMMUNICATION

Secure your Voice, Video, and Text Communication with technologies which has been tested military grade.

CCTV SOLUTIONS & VIDEO ANALYTICS

Our video analytics integrated to CCTV enables customers aware at the point of a violation or robbery, helps you to prevent while it is happening.

NETWORK SOLUTIONS

Our network solutions consist of a wide range of technology which will make sure your business is always connected with both internal and external devices to serve your customers more effectively than the competition.

NETWORK MONITORING SOLUTION

Monitoring solutions for your local network to maintain continuous connectivity to support your business operations.

ManageEngine

solarwinds

NETWORK CABLING

Reliable, durable, efficient connectivity after one time installation.

INFRASTRUCTURE MANAGED SERVICES

The optimization of the foundational IT systems that power innovation and organizational change.

If your goal is to successfully adopt new technologies, you need to make sure that you have the proper technological infrastructure and access to qualified resources.

Candan Technology has the knowledge and experience to help your firm's core IT infrastructure evolve with the changing demands of the market, create value for the firm, and brace for the information realm.

Infrastructure Management Services (IMS) are a cornerstone of our business, and we make it our mission to provide first-rate support for our customers by using a flexible enterprise governance architecture. In addition to horizontal level 1 application and infrastructure support, the solution also includes poly cloud provisioning and managed services. We aid businesses in increasing productivity by integrating low - or no-touch AIOps with highly automated processes.
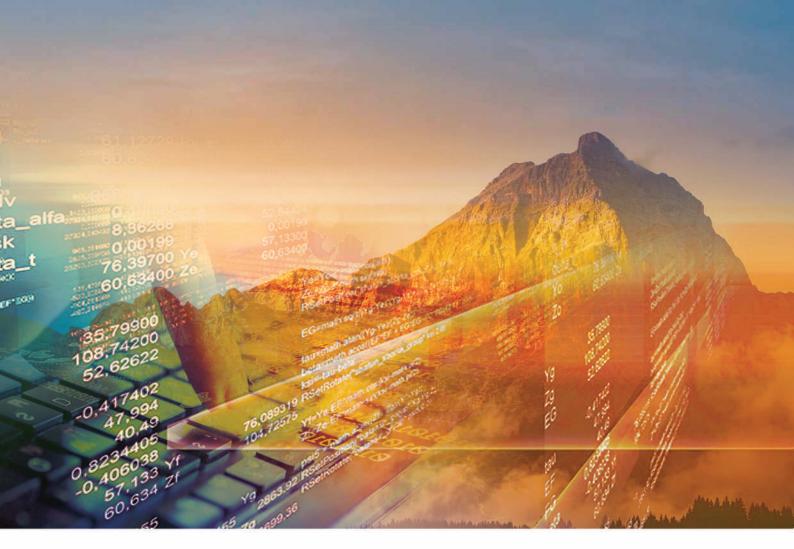

Our licensed infrastructure architects, solutions professionals, and business experts assist clients worldwide in designing, constructing, managing, and innovating. Our service promotes effective operations and allows businesses to prosper in the digital age by utilizing advanced IT systems. We make sure to apply an alteration approach towards IMS that helps us deliver our services with a focus on continuous improvement.

All of the essential IMS and modernization services are included in our ITIL-based infrastructure transformation, which is in turn driven by extreme automation. Our infrastructure is reliable and consistent, which helps propel improved business results. The infrastructure design, construction, management, and innovation phases are all covered by Candan Technology's extensive list of expert services.

FUNDAMENTAL INFRASTRUCTURE SERVICES

Optimize the user experience, gain real-time insight into asset performance, and automate day-to-day infrastructure management with the help of software. Among the many services we are:

- ☑ Datacenter – Compute, Storage, Backup & Replication, Consolidation

- ☑ Software Define Solutions – Server Virtualization, Storage Virtualization, Network Virtualization.

- ☑ Network – Datacenter Switching, Active Network (Switching & Wireless), Passive Networking (Network Cabling), Network Operation Center (NOC), Voice, Video.

- ☑ Client – Virtual Desktop Infrastructure (VDI), Application Virtualization, Mobile Device Management (MDM).

- ☑ Security – Vulnerability Tests, Security Audits, Datacenter & Perimeter Security, Data Loss Prevention (DLP), Encryption, Identity and access management (IAM), Governance Risk Compliance (GLC), Security information and event management (SIEM).

- ☑ Operation – Domain Name System (DNS), Active Directory, Email Server.

CONSULTATION SERVICES

We offer our management and engineering experience as consultants on specific projects. Our services aid clients in taking their conceptualization from the conceptual stage to the operational stage of their project. We go over topics like requirements analysis, designing optimal solutions, managing complex projects, putting them into action, and connecting them with other systems.
